Narratives

Mitigation Needs Assessment:

¿The Mitigation Needs Assessment utilizes the findings of West Virginia's 2018 Statewide Hazard Mitigation Plan (SHMP), regional and local mitigation plans, data and research acquired from additional resources including but not limited to, National Centers for Environmental Information, US Department of Homeland Security's Homeland Infrastructure Foundation-Level Data. Throughout this assessment, the State cites relevant data sources (84 FR 45847).

In preparation of this Mitigation Needs Assessment, the State also consulted with other jurisdictions, the private sector, and other government agencies, including State and local emergency management agencies that have primary responsibility for the administration of FEMA mitigation funds (84 FR 45840). This The Mitigation Needs Assessment utilizes the findings of West Virginia's 2018 Statewide Hazard Mitigation Plan (SHMP), regional and local mitigation plans, data and research acquired from additional resources including but not limited to, National Centers for Environmental Information, US Department of Homeland Security's Homeland Infrastructure Foundation-Level Data. Throughout this assessment, the State cites relevant data sources (84 FR 45847). This collaboration with multiple stakeholders and analysis of various data sources was key to ensuring a comprehensive analysis of the hazards addressed here and subsequent mitigation measures to be implemented to reduce or eliminate the substantial risk of loss of life, injury, damage and loss of property, along with suffering and hardship.

The State consulted with the West Virginia Division of Emergency Management (EMD), regional planning commissions, the private sector, and other governmental agencies to provide a multihazard risk-based mitigation needs assessment for the eligible counties. The data suggests that based on the total number of high-ranking hazards in each of West Virginia's county local hazard mitigation plans, the top risks impacting the state in order are flooding, winter weather, and severe storms. Based on the findings of West Virginia Mitigation Needs Assessment (MNA) there is a high demand and need for the implementation of infrastructure mitigation projects that will improve resiliency to hazard impacts, such as flooding. Addressing the mitigation needs of West Virginia requires the continued fostering of a culture of preparedness and the provision of tools for proper planning. A limitation that was noted in both the State's 2018 Hazard Mitigation Plan, and each of the regional planning council's mitigation plans was that availability, standardization, or access to data related to historical or future risk for several hazards did not exist or was difficult to find. While the State has made great strides through HMGP funding to produce web mapping tools, local level analysis across many hazards varies in availability and consistency across the state. Planning studies in coordination with groups such as state agencies, federal agencies, universities, and regional planning councils, to better identify hazard risks, impacts, and subsequent mitigation measures, can serve as a valuable use of mitigation funds.

Proposed Use of Funds:

Proposed Use of Funds:

Based on the findings of West Virginia Mitigation Needs Assessment (MNA) there is a high demand and need for the implementation of infrastructure mitigation projects that will improve resiliency to hazard impacts, such as flooding. Considering this data-driven analysis along with stakeholder and community input, WVDO is proposing the following CDBG-MIT programs that will work to achieve the goals of risk reduction and increased resilience:

1. General Infrastructure - This program will provide funding opportunities for local governments and state agencies to develop large-scale mitigation activities that allow communities to better withstand future disasters. Projects may include the rehabilitation of critical infrastructure; rehabilitation or construction of stormwater management systems; improving or installing retention basins; relocating water lines; culvert improvements; and green infrastructure.
2. Public Facility Hardening - This program will assist local governments and state agencies with hardening public This includes all critical public facilities such as potable water facilities, wastewater treatment facilities, public shelters, fire and police stations, medical centers, etc. CDBG-MIT funds will allow local communities to fund previously identified public facility mitigation needs and/or identify public facility mitigation needs that will harden the facility and reduce or eliminate damages and loss of life and property.
3. Regional and Local Planning - This program will make competition-based allocations to local governments and other eligible applicants to cover a wide variety of planning activities related to local and regional mitigation needs.
4. Hazard Mitigation Plans - West Virginia will use funding to update and develop a Hazard Mitigation Plan (HMP) or enhanced HMP. FEMA approval of the enhanced HMP would make the state eligible for assistance up to 20 percent for estimated aggregate amounts of a disaster. This State plan would serve as the framework for local hazard mitigation plans within the state. CDBG-MIT funds will also be used for these local planning efforts managed by the five Regional Planning and Development Councils (RPDCs) found within the HUD and State MID areas.
5. State Planning - The State may select and execute planning studies in coordination with groups such as state agencies, federal agencies, universities, regional planning groups, to conduct studies with CDBG-MIT funds. Studies and planning efforts may be identified through local community input, including public meetings, requests for information, or surveys. Communities may recommend studies to be completed, but these planning funds will be administered by the State. State planning funds may also be used for capacity building at the state and local level.

Overall	This Report Period	To Date

Most Impacted and Distressed	\$53,247,000.00	\$56,142,700.00	\$ 0.00

Overall Progress Narrative:

This quarter, the 18 Community Development Block Grant Mitigation (CDBG-MIT) projects currently funded have received a Notice to Proceed (NTP) and are in various stages of creating the environmental review record, planning, or project design. The second round of CDBG-MIT funding recommendations were submitted to the Governor's Office for approval on March 10th, 2023. CDBG-MIT staff anticipates the Governor's Office will make aware announcements by April 30th, 2023.

Activity Description:

In accordance with the Federal Register, WVDO's aggregate total for administrative expenditures will not exceed 5% of its total grant (plus any program income). Accordingly, the State is allocating a budget of 5% (\$5,324,700) to cover the costs of administering the CDBG-MIT grant for the 12 year grant period as well as closeout and monitoring period.

Location Description:

Clay, Greenbrier, Kanawha, Nicholas, Fayette, Jackson, Lincoln, Monroe, Pocahontas, Roane, Summers, and Webster

Activity Progress Narrative:

CDBG-MIT staff provided technical assistance to all subrecipients via emails, phone calls, and monthly project calls. Monthly project calls are formally held to provide technical assistance to the subrecipient and project team and to monitor compliance with each project schedule. Staff entered Technical Amendment #2 (TA2) in DRGR to reduce the State Planning budget line from \$3,682,350 to \$1,500,000, reduce the Hazard Mitigation Planning budget line from \$2,500,000 to \$2,125,000, and to increase the infrastructure budget line from \$91,986,950 to \$94,544,300.

ALDERSON, TOWN OF	\$149,515.14	\$149,515.14
Most Impacted and Distressed Expended	\$0.00	\$0.00

Activity Description:

The Town of Alderson is located in Greenbrier County, WV and serves approximately 704 customers within Greenbrier, Monroe, and Summers Counties. The Town's goal is to continue to provide a reliable source of water service and fire protection to their residents and the surrounding community. Through this project, the Town of Alderson hopes to replace and relocate its existing water treatment plant. The current plant site is located within the floodplain of the Greenbrier River and as a result, faces the threat of future flood events. In addition, the Town looks to construct a raw water intake with associated piping to provide a reliable backup source of raw water in the event that flood debris damages the primary intake located on the Greenbrier River.

Location Description:

The current plant site is located within the floodplain of the Greenbrier River in the Town of Alderson in Greenbrier County and as a result, faces the threat of future flood events. To mitigate the risk, this project proposes the relocation and replacement of the Town's existing water treatment plant with a package water treatment plant on the adjacent lot that is not within the Greenbrier River floodplain. An existing vacant house located on the adjacent property will need to be removed to accommodate the proposed plant site. This solution will provide the most cost and time efficient solution for the Town's future water plant operation. In addition, this project will construct an alternative 350 gpm raw water pump station along Muddy Creek and the associated 6500 LF of 8" piping to connect it to the plant.

Activity Progress Narrative:

During this quarter, the project engineer continued plant design based on the existing proposal. A new site is required for the future water plant and the project team has identified 3 new potential sites. Currently, the team is working on acquiring the best site out of those 3.

TOWN OF ADDISON	\$183,126.67	\$183,126.67
Most Impacted and Distressed Expended	\$0.00	\$0.00

Activity Description:

This project will replace an existing and undersized storm sewer in the Town of Addison, directly serving Addison's population of 806 people. The project currently consists of 12,320 feet of 30", 24", and 12" storm sewer pipes with 9C drop inlets in multiple streets in town. Webster Springs sits between the confluence of the Elk River and the Back Fork of the Elk River. Upland portions of the Town are located on steep mountainside terrain with lowland portions of the Town being adjacent to the two rivers and very flat.

Location Description:

The project is located in the the Town of Addison (commonly known as Webster Springs) in Webster County. Webster Springs sits between the confluence of the Elk River and the Back Fork of the Elk River. Upland portions of the Town are located on steep mountainside terrain with lowland portions of the Town being adjacent to the two rivers and very flat.

Activity Progress Narrative:

Final design is nearly completed at 90%. Currently, the project engineer is working with the community to make any final design adjustments. The Environmental Review Record is still underway.

West Virginia Development Office	\$3,480.05	\$417,401.80
Most Impacted and Distressed Expended	\$0.00	\$0.00

Activity Description:

In accordance with the Federal Register, WVDO's aggregate total for administrative planning and administrative costs combined may not exceed 20%, with administrative funds capped at 5%. Because the State is allocating its full 5% to the cost of administering the CDBG-MIT grant, the State has 15% remaining for planning activities. At this time, the State wishes to only allocate 6.1% to state-level planning activities. In total, the planning programs described in the previous section allocate a combined 8%, and the State will retain the 6.1% (totaling 14.1% for planning; 5% for administration). Activities the State may undertake with its planning allocation include but are not limited to Action Plan writing and amendments, capacity support for the State's Resiliency Office (SRO), funding for the update of the State Hazard Mitigation Plan, and coordination of a State wide data collection system for the WVCAD office to centralize risk and hazard data.

Location Description:

Clay, Greenbrier, Kanawha, and Nicholas, Fayette, Jackson, Lincoln, Monroe, Pocahontas, Roane, Summers, and Webster

Activity Progress Narrative:

This quarter, the WVCAD CDBG-MIT staff participated in 2 monthly meetings with the State Resiliency Office and 3 WV State Hazard Mitigation Plan Risk Assessment meetings. The CDBG-MIT Program also finalized contracting with Region II Planning & Development Council (RPDC 2) to update the Region 2 Hazard Mitigation Plan.

Activity Description:

This project will identify residential bridges at risk of flooding in Greenbrier, Nicholas, Fayette, Pocahontas, Webster, and Lincoln counties.

Location Description:

The project will take place throughout the following Counties: Lincoln, Fayette, Greenbrier, Nicholas, Pocahontas, and Webster.

Activity Progress Narrative:

This quarter, the project team identified and prioritized potential crossing structures for evaluation. The project engineer is currently conducting field surveys to collect additional data on the prioritized crossing structures identified by the project team. A project dashboard is being developed to outline the collected data and keep a living document of the data which can be updated with additional information after the project is complete. The Engineering procurement information was sent to the State and approved to move forward.

LEWISBURG, CITY OF	\$16,500.00	\$16,500.00
Most Impacted and Distressed Expended	\$0.00	\$0.00

Activity Description:

The purpose of the City of Lewisburg Stormwater Management Study is to analyze, map, and develop plans that address deficiencies in the aging stormwater system and the development of sinkholes caused by the flow of stormwater into the underground karst system the city is built upon. This study will map the current stormwater drainage system and note areas that will need to be corrected in future projects. Understanding that the stormwater system needs to be improved along with identifying and mapping potential problem areas will give city planners a guide upon which to develop an action plan to address and prioritize key areas of need. Sinkhole Watershed modeling will be done to link stormwater drainage to the develop of sinkholes throughout the city. The study will produce a karst stormwater operation and management plan that will address the immediate and future needs to mitigate stormwater damage and sinkhole development in the Lewisburg city limits. A karst stormwater monitoring plan will also be developed to provide the city a source to better understand and monitor how stormwater is affecting the underground karst system and develop an action plan to mitigate future problem areas. The study will be completed over a 24 -month period which will include field study and data collection, watershed modeling and analysis, and development of a stormwater system management plan. The work will be completed by the contracted consultant working along side the Director of Public Works for the city. The short term anticipated outcomes are the mapping of the stormwater system leading to a better understanding of how to address future issues along with the development of a stormwate1 management plan that will become the guide for future activities.

Long term outcomes would be the repair or replacement of the aging stormwater system which will in turn minimize the development of sinkholes. This will reduce the cost to the city for the continual and costly repair that sinkholes cause throughout the city. This will also increase the safety for the citizens of Lewisburg both as pedestrians and motorists. LMI designated, along with other citizens will benefit from safety brochures produced and gain a better understanding of the hazards of stormwater flow and sinkhole designations. This study will act as a guide for the development of long-range capital improvement and land use planning within the City of Lewisburg. Building code amendments will also be addressed in the study and recommendations made for the city's approval.

Location Description:

The study will encompass the entire City of Lewisburg located in a Greenbrier County, which is a MID County.

Activity Progress Narrative:

This project is set up to be completed in three stages:

- 1) Field Survey & Data Collection
- 2) Watershed Modeling & Analysis
- 3) Stormwater System Management

In the 1st Quarter of 2023, the first stage (Field Survey & Data Collection) is at 15% completion and preliminary mapping has been completed.

Activity Description:

This planning project will evaluate temporary flood control barriers and critical facilities for necessary short-term flood protection in Lincoln, Kanawha, Clay, Nicholas, Webster, and Greenbrier counties.

Location Description:

Project will take place throughout the following Counties: Lincoln, Clay, Webster.

Activity Progress Narrative:

CEGAS is evaluating temporary flood barrier systems available in the U.S. that may provide some extensive level of flood protection for critical infrastructure sites that have experienced past flooding episodes. Site information is being compiled and flood barrier systems evaluated to determine if one or more temporary flood barrier systems would be a suitable choice for future flood protection.

A total of 35 sites have been initially reviewed for potential evaluation to date, with 33 site visits conducted, and 26 sites identified for flood barrier package evaluations. During this reporting period, a total of six reports were completed on the following sites:

1. Alderson Water Plant
2. Alderson Post Office
3. Clay Middle School
4. Nallen Post Office
5. Rainelle Water Plant and Well House
6. Birch River Voluntary Fire Department

Activity Description:

This project will identify flood prone culverts and low flow bridge structures, record the location and attributes of these sites, and develop a methodology to manage an inventory that allows users to view data in real time. The initial project locations will be in Monroe and Summers counties.

Location Description:

The project will take place throughout the following non-MID Counties: Monroe and Summers.

Activity Progress Narrative:

CEGAS and Region I Planning & Development Council are evaluating and mapping flood prone culverts and bridges in Monroe and Summers Counties. Site information is being compiled through field work and by using GIS technology. This reporting period, field work and data collection took place in Monroe County on 3/1/2023. CEGAS identified 5 new flood prone sites in Monroe County. CEGAS also coordinated with Region I Planning & Development Council to reach out to Summers Counties on purpose of the project.

Activity Description:

To provide continued support to eligible Regional Planning Development Councils (RPDCs), the State will provide non-competitive direct grants for Hazard Mitigation Plan updates. This will occur on a rolling basis as the plan expire. There are five RPDCs that operate in the HUD and State MID areas; these RPDCs will be eligible for grants under this program. Additionally, the State may reserve funds under this program to update its State Hazard Mitigation Plan as related to the 12 HUD and State MID counties. Funding will benefit nonMID counties.

Location Description:

Region plan serving Roane and Jackson.

Activity Progress Narrative:

The project team continues to collect all Hazard Mitigation Plan adoption resolutions from each entity within the region.
